Notice for this monitor

This product is suited to general purposes like creating documents, viewing multimedia content.

This product has been adjusted specifically for use in the region to which it was originally shipped. If the product is used outside the region, it may not operate as specified in the specifications.

This product may not be covered by warranty for uses other than those described in this manual.

The specifications noted in this manual are only applicable when the following are used:

- Power cords provided with the product
 - Signal cables specified by us
-

Only use optional products manufactured or specified by us with this product.

As it takes about 30 minutes for the performance of electrical parts to stabilize, adjust the monitor 30 minutes or more after the monitor power has been turned on.

Monitors should be set to a lower brightness to reduce changes in luminosity caused by long-term use and maintain a stable display.

When the screen image is changed after displaying the same image for extended periods of time, an afterimage may appear. Use the screen saver or power save function to avoid displaying the same image for extended periods of time.

Periodic cleaning is recommended to keep the monitor looking new and to prolong its operation lifetime (refer to [“Cleaning” \(page 4\)](#)).

The LCD panel is manufactured using high-precision technology. Although, missing pixels or lit pixels may appear on the LCD panel, this is not a malfunction. Percentage of effective dots: 99.9994% or higher.

The backlight of the LCD panel has a fixed lifetime. When the screen becomes dark or begins to flicker, please contact your local EIZO representative.

Do not press on the panel or edge of the frame strongly, as this may result in display malfunctions, such as interference patterns, etc. If pressure is continually applied to the panel, it may deteriorate or damage your panel. (If the pressure marks remain on the panel, leave the monitor with a black or white screen. The symptom may disappear.)

Do not scratch or press on the panel with any sharp objects, as this may result in damage to the panel. Do not attempt to brush with tissues as this may scratch the panel.

When the monitor is cold and brought into a room or the room temperature goes up quickly, dew condensation may occur on the interior and exterior surfaces of the monitor. In that case, do not turn the monitor on. Instead wait until the dew condensation disappears, otherwise it may cause some damage to the monitor.

Cleaning

Attention

- Chemicals such as alcohol and antiseptic solution may cause gloss variation, tarnishing, and fading of the cabinet or panel, and also quality deterioration of the image.
- Never use any thinner, benzene, wax, and abrasive cleaner, which may damage the cabinet or panel.

Note

- The optional ScreenCleaner is recommended for cleaning the cabinet and panel surface.

If necessary, the stains on the cabinet and panel surface can be removed by moistening part of a soft cloth with water.

To use the monitor comfortably

- An excessively dark or bright screen may affect your eyes. Adjust the brightness of the monitor according to the environmental conditions.
- Staring at the monitor for a long time tires your eyes. Take a 10-minute rest every hour.

Chapter 1 Introduction

Thank you very much for choosing an EIZO color LCD monitor.

1-1. Features

- 23.0" wide format LCD (EV2316W / EV2336W)
- 24.1" wide format LCD (EV2416W / EV2436W)
- Applicable to the resolution of 1920 × 1080 (EV2316W / EV2336W)
- Applicable to the resolution of 1920 × 1200 (EV2416W / EV2436W)
- IPS panel with 89° horizontal and vertical viewing angles (EV2336W / EV2436W only)
- Applicable to DisplayPort (applicable to 8 bit)*¹

The image signal and audio signal can both be transmitted via a single DisplayPort cable.

*1 When transmitting an audio signal using the DisplayPort cable, the graphics board must be compatible with audio output (see “6-7. Specifications” (page 54)).

- The FineContrast function allows the user to select the display mode optimum to the displayed image.
 - The Paper mode reproduces a printed paper effect on the monitor.
See “To select the display mode (FineContrast Mode)” (page 19).
- The software “ScreenManager Pro for LCD (DDC/CI)” to adjust the screen using the mouse and keyboard is included
See “1-3. EIZO LCD Utility Disk” (page 11).
 - EyeCare Filter
Texture of the paper is reproduced by displaying a translucent image in the foreground of the desktop.
By using this function with the Paper mode, the screen looks more like paper.
See “To select the display mode (FineContrast Mode)” (page 19).
- Supports the power management software “EIZO EcoView NET”
For more information, refer to our web site (<http://www.eizo.com>).
- Power saving function
Suppressing the power consumption*² reduces the carbon dioxide emissions. This product is equipped with power saving function.
 - Power Consumption when main power switch is Off: 0 W
Equipped with main power switch.
Turning off the main power switch completely shuts off power supply to the monitor while the monitor is not used.
 - Auto EcoView
The ambient light sensor on the front side of the monitor detects the environmental brightness to adjust the screen brightness automatically and comfortably. Excessively high brightness may lead a damage to the natural environment as well as to your eyes. Suppressing the excessively high brightness will be helpful to reduce the power consumption and the damage to your eyes.
See “Auto EcoView” (page 37).
 - EcoView Optimizer 2
The monitor automatically adjusts the screen brightness according to the white level of the input signal. This function can reduce the power consumption while maintaining the brightness specified by the input signal.
See “EcoView Optimizer 2” (page 38).
 - EcoView Sense
The sensor on the front side of the monitor detects the movement of a person. When a person moves away from the monitor, the monitor shifts to the power saving mode automatically and does not display the images on the screen. Therefore, the function reduces the power consumption. The sensitivity and time until the power saving mode is activated can be set according to the monitor usage environment and movement of the user.
See “4-4. Setting the power saving mode when a person leaves the monitor” (page 38).

See “3-3. Switching Viewing Angle (EV2316W / EV2416W only)” (page 32).

- Supports portrait format (FlexStand2 only)
- Displays HDCP (High-bandwidth Digital Protection) protected contents.

Note

- This monitor supports the portrait display. This function allows you to change the orientation of the Setting menu when using the monitor screen in vertical display position (see “3-6. Setting Orientation” (page 33)).

4-4. Setting the power saving mode when a person leaves the monitor

The sensor on the front side of the monitor detects the movement of a person by using the EcoView Sense function. When a person moves away from the monitor, it shifts to the power saving mode automatically and does not display the images on the screen to reduce the power consumption. When a person comes near the monitor again, it recovers from the power saving mode and displays the images. The sensitivity and time until the power saving mode is activated can be set according to the monitor usage environment and movement of the user.

Note

- At the time of shifting to power saving mode, the message that indicates shifting is displayed.

Procedure

1. Press .

2. Choose “EcoView Sense” in the “EcoView Menu”, and press ENTER.
The “EcoView Sense” menu appears.
3. Select “On” or “Off” with ▼ or ▲.
4. Press ENTER to exit.

5. When “On” is selected, select “EcoView Sense Settings” for setting the details.

Item	Setting Range	Description
Time	5, 30 sec 1, 3, 5, 10, 15, 30, 45, 60 min	Specifies the time from when a person leaves the monitor until the “No Presence detected” message appears. The monitor shifts to the power saving mode about 20 seconds after the message is displayed.
Sensitivity	Level 5 Level 4 Level 3 Level 2 Level 1	When the setting level is high (“Level 5” at maximum), even minor movements of a person are detected, causing the monitor to shift to the power saving mode only infrequently. On the other hand, when the setting level is low (“Level 1” at minimum), only major movements of a person are detected, allowing the monitor to shift to the power saving mode frequently. EcoView Sense is activated when the sensor on the front side of the monitor detects the movement of heat. Therefore, the sensitivity should be changed depending on the typical user’s clothes or the typical room temperature. If the monitor shifts to or recovers from the power saving mode contrary to your expectations, try changing the setting level.
Reset	-	This function resets all adjustments to the default settings.

Note

- When the monitor is used in the “Portrait” direction, the detection sensitivity is lower than the “Landscape” direction. Try increasing the sensitivity setting value when switching the mode to the power saving mode.
- To use the monitor comfortably, increase the sensitivity for high temperatures, which reduces the detection sensitivity, and reduce the sensitivity for low temperatures, which increases the detection sensitivity.

4-5. Checking the power saving level

The EcoView menu allows you to check Power Reduction, CO₂ Reduction, and Eco Performance Level. The more indicators light up representing the Eco Performance Level, the higher the power saving level attained.

Example: EV2436W

Procedure

1. Press .

The “EcoView Menu” menu appears.

4-6. Enabling / Disabling Auto Power-OFF

This function allows you to specify whether to turn on / off the monitor automatically after a specified time has elapsed in the power saving mode.

Chapter 6 Reference

6-1. Attaching the Optional Arm

An optional arm (or an optional stand) can be attached by removing the stand section. Please refer to our web site for the corresponding optional arm (or optional stand). <http://www.eizo.com>

Attention

- When attaching an arm or stand, follow the instructions of their User's Manual.
- When using another manufacturer's arm or stand, confirm the following in advance and select one conforming to the VESA standard.
 - Clearance between the screw holes: 100 mm × 100 mm
 - Thickness of plate: 2.6 mm
 - Strong enough to support weight of the monitor unit (except the stand) and attachments such as cables.
- When using another manufacturer's arm or stand, use the screws as described below.
 - FlexStand2: Screws fixing the stand to the monitor
 - TriStand2: Screws supplied with this product (M4 × 12 mm)
- When using an arm or stand, attach it to meet the following tilt angles of the monitor.
 - Up 45°, down 45° (horizontal display, and vertical display rotated 90 degrees clockwise)
- Connect the cables after attaching an arm or stand.
- Do not move the removed stand up and down. Doing so may result in injury or device damage.
- The monitor and arm or stand are heavy. Dropping them may result in injury or equipment damage.
- When setting the monitor to the portrait style, turn the monitor screen 90° in clockwise direction.

Procedure

1. Lay the LCD monitor on a soft cloth spread over on a stable surface with the panel surface facing down.

2. Remove the stand.

Using a screwdriver, loosen the screws securing the unit and the stand (FlexStand2: four positions, TriStand2: three positions).

3. Attach the arm or stand to the monitor.

Secure the monitor to the arm or stand using the screws specified in the User's Manual of the arm or stand.

6-2. Detaching / Attaching the TriStand2 Stand Base

Note

- There are 2 types of shapes for the stand brace and the base mounting section (refer to the figures in the procedure). Check the shape of the monitor you have purchased.

Detaching procedure

The Stand base that was attached during setup can be detached using the following procedures.

- 1. Lay the LCD monitor on a soft cloth spread over on a stable surface with the panel surface facing down.**
- 2. Turn the fixing screw for the Stand base in the “RELEASE” direction to detach the base.**

- 3. Remove the Stand base while lifting it up.**

Attaching procedure

The once removed the Stand base can be attached to the monitor again with the following procedures.

- 1. Lay the LCD monitor on a soft cloth spread over on a stable surface with the panel surface facing down.**
- 2. Hold the Stand base with the “REAR” side facing upward, align the hole (a) of the Stand base with the tab (b) at the bottom of the monitor, and snap the tab into the hole.**

- 3. Turn the supplied screw in the “LOCK” direction to lock the Stand base.**

Tighten the screw firmly to the end.

- 4. Place the monitor on a stable surface.**

6-3. Attaching / Detaching the TriStand2 Cable Holder

When you want to use the cable holder with TriStand2, follow the procedure below. The holder can also be removed.

Note

- FlexStand2 is a set comprised of the stand and the cable holder.
-

Attaching procedure

1. Pass the cables through the cable holder.

2. Shut the bottom of the cable holder.

3. While holding the shut section, insert the cable holder into the Stand base.

Note

- The cable holder can be inserted either perpendicular or parallel to the base. Change the direction of the cable holder according to the conditions of the cables.

Detaching procedure

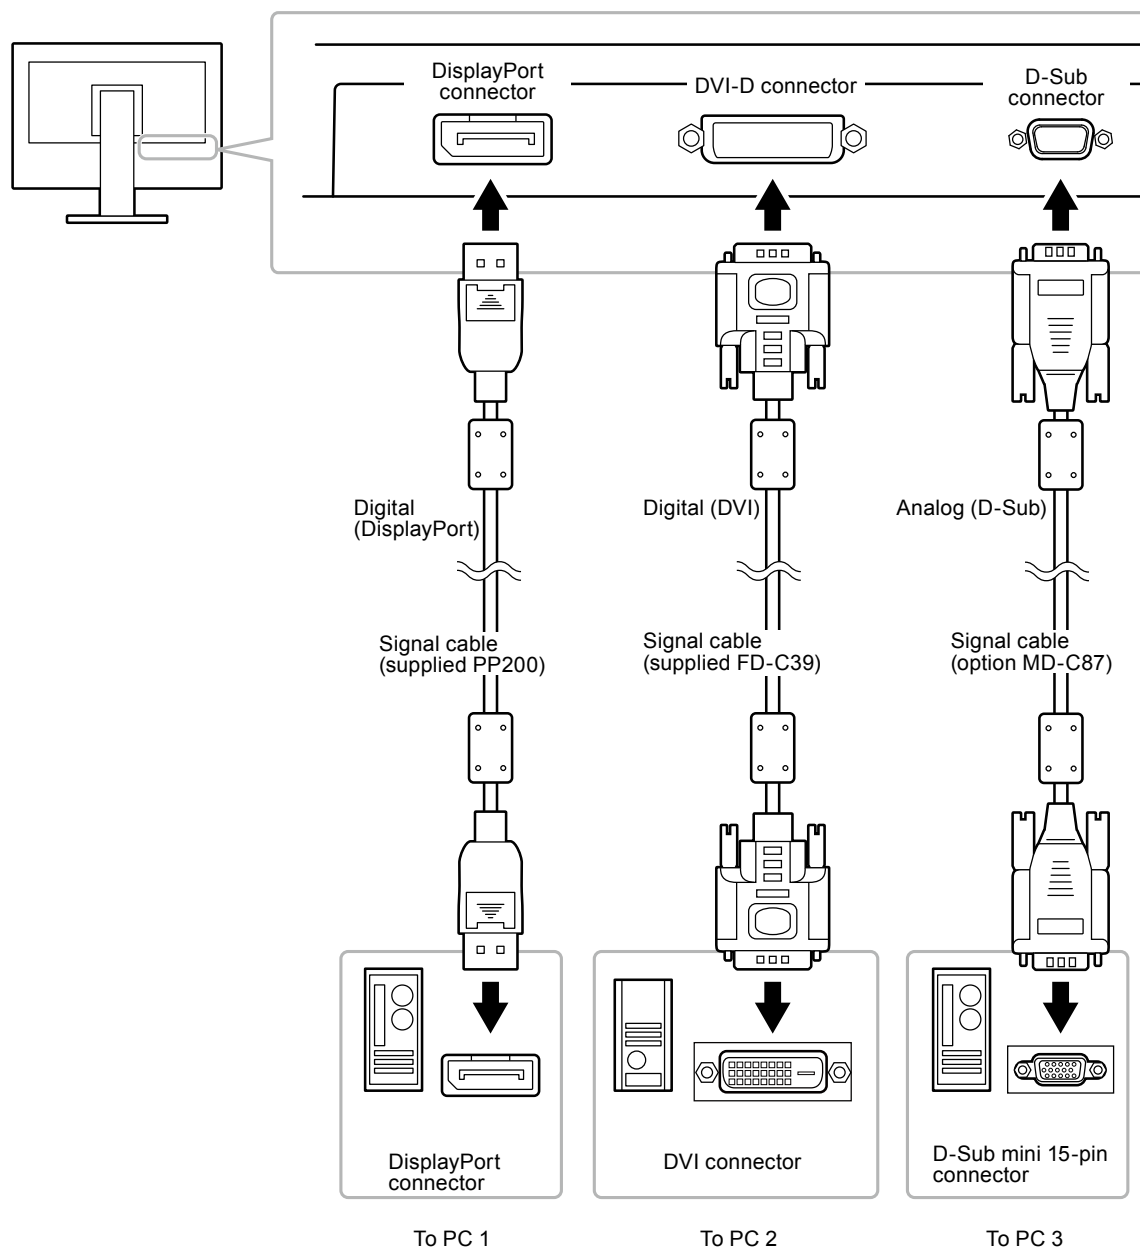

- 1. Shut the bottom of the cable holder.**
- 2. While holding the shut section, lift the cable holder upward to remove it from the Stand base.**

6-4. Connecting Multiple PCs

The product has multiple connections to PCs and allows you to switch to one of the connections for display.

Connection examples

● To switch among input signals

The input signal switches each time **SIGNAL** is pressed.

When the signal is switched, the active input port name appears at the top right corner of the screen.

● To set input signal selection

Setting	Function
Auto	The monitor recognizes the connector through which PC signals are input. When a PC is turned off or enters the power saving mode, the monitor automatically displays another signal.
Manual	The monitor detects only the PC's signals currently displaying automatically. Select an active input signal with SIGNAL.

Procedure

1. Choose "Monitor Settings" from the Adjustment menu, and press ENTER.
2. Choose "Input Signal" from "Monitor Settings", and press ENTER.
3. Select "Auto" or "Manual" with ▼ or ▲.
4. Press ENTER to exit.

Note

- When "Auto" is selected for "Input Signal", the monitor's power saving function works only when all PCs are in the power saving mode.

6-5. Making Use of USB (Universal Serial Bus)

This monitor has a hub compatible with USB. Connected to a PC compatible with USB or another USB hub, this monitor functions as a USB hub allowing connection to peripheral USB devices.

● Required System Environment

- Windows 2000 / XP / Vista / 7 or Mac OS 9.2.2 and Mac OS X 10.2 or later
- USB cable (commercially available product)

Attention

- This monitor may not work depending on PC, OS or peripheral devices to be used. For USB compatibility of peripheral devices, contact their manufacturers.
- Devices connected to the USB downstream port work when the monitor is in power saving mode or when the power button of the monitor is Off. Therefore, power consumption of the monitor varies with connected devices even in the power saving mode.
- When the main power switch is Off, device connected to the USB port will not operate.

● Connection Procedure (Setup of USB Function)

1. Connect the monitor first to a PC using the signal cable, and run the PC.
2. Connect the supplied USB cable between the USB downstream port of a USB compatible PC (or another USB hub) and the monitor's USB upstream port.

The USB hub function is set up automatically upon connection of the USB cable.

3. Connect the peripheral USB device to the USB downstream port of the monitor.

The following table shows factory preset analog signal timing (for analog signal only).

Attention

- Display position may be deviated depending on the PC connected, which may require screen adjustment using Setting menu.
- If a signal other than those listed in the table is input, adjust the screen using the Setting menu. However, screen display may still be incorrect even after the adjustment.
- When interlace signals are used, the screen cannot be displayed correctly even after screen adjustment using the Setting menu.

6-9. Glossary

Clock

The analog signal input monitor needs to reproduce a clock of the same frequency as the dot clock of the graphics system in use, when the analog signal is converted to a digital signal for image display. This is called clock adjustment. If the clock pulse is not set correctly, some vertical bars appear on the screen.

DDC/CI (Display Data Channel / Command Interface)

VESA provides the standardization for the interactive communication of the setting information, etc. between a PC and the monitor.

DisplayPort

DisplayPort is a next-generation digital AV interface that allows connection of the PC, audio, imaging devices, etc. to the monitor. One cable can transfer sound with images.

DVI (Digital Visual Interface)

DVI is a digital interface standard. DVI allows direct transmission of the PC's digital data without loss. This adopts the TMDS transmission system and DVI connectors. There are two types of DVI connectors. One is a DVI-D connector for digital signal input only. The other is a DVI-I connector for both digital and analog signal inputs.

DVI DMPM (DVI Digital Monitor Power Management)

DVI DMPM is a digital interface power saving function. The "Monitor ON (operating mode)" and "Active Off (power saving mode)" are indispensable for DVI DMPM as the monitor's power mode.

Gain

This is used to adjust each color parameter for red, green and blue. An LCD monitor displays the color by the light passing through the panel color filter. Red, green and blue are the three primary colors. All the colors on the screen are displayed by combining these three colors. The color tone can be changed by adjusting the light intensity (volume) passing through each color's filter.

Gamma

Generally, the monitor brightness varies nonlinearly with the input signal level, which is called "Gamma Characteristic". A small gamma value produces a low-contrast image, while a large gamma value produces a high-contrast image.

HDCP (High-bandwidth Digital Content Protection)

Digital signal coding system developed to copy-protect the digital contents, such as video, music, etc. This helps to transmit the digital contents safely by coding the digital contents sent via the DVI or HDMI connector on the output side and decoding them on the input side. Any digital contents cannot be reproduced if both of the equipments on the output and input sides are not applicable to HDCP system.

Overdrive

This technology enhances response speed by increasing the potential difference at the time of motion of liquid-crystal pixels, and it is used for liquid-crystal TV sets and others in general. It provides clear-cut three-dimensional display with little afterimage, by improving response speed of the intermediate graduation range that frequently appears in moving images.

Phase

Phase means the sampling timing to convert the analog input signal to a digital signal. Phase adjustment is made to adjust the timing. It is recommended that phase adjustment be made after the clock is adjusted correctly.

Range Adjustment

Range adjustment controls the signal output levels to display every color gradation. It is recommended that range adjustment be made before color adjustment.

Resolution

The LCD panel consists of numerous pixels of specified size, which are illuminated to form images. This monitor consists of horizontal 1920 pixels and 1080 vertical pixels (EV2316W / EV2336W), or horizontal 1920 pixels and 1200 vertical pixels (EV2416W / EV2436W). At a resolution of 1920×1080 (EV2316W / EV2336W) or 1920×1200 (EV2416W / EV2436W), all pixels are illuminated as a full screen (1:1).

sRGB (Standard RGB)

International standard for color reproduction and color space among peripheral devices (such as monitors, printers, digital cameras, scanners). As a form of simple color matching for the Internet, colors can be displayed using tones close to those of the transmission and reception devices.

Temperature

Color temperature is a method to measure the white color tone, generally indicated in degrees Kelvin. The screen becomes reddish at a low temperature, and bluish at a high temperature, like the flame temperature.

5000 K: Slightly reddish white

6500 K: White referred to as daylight-balanced color

9300 K: Slightly bluish white

TMDS (Transition Minimized Differential Signaling)

A signal transmission system for digital interface.

VESA DPM (Video Electronics Standards Association - Display Power Management)

VESA specifications achieve increased energy efficiency for computer monitors. This involves standardization of signals sent from the computer (graphics board).

DPM defines the status of signals transmitted between the computer and monitor.

Hinweise zur Auswahl des richtigen Schwenkarms für Ihren Monitor

Dieser Monitor ist für Bildschirmarbeitsplätze vorgesehen. Wenn nicht der zum Standardzubehör gehörige Schwenkarm verwendet wird, muss statt dessen ein geeigneter anderer Schwenkarm installiert werden. Bei der Auswahl des Schwenkarms sind die nachstehenden Hinweise zu berücksichtigen:

Der Standfuß muß den nachfolgenden Anforderungen entsprechen:

- a) Der Standfuß muß eine ausreichende mechanische Stabilität zur Aufnahme des Gewichtes vom Bildschirmgerät und des spezifizierten Zubehörs besitzen. Das Gewicht des Bildschirmgerätes und des Zubehörs sind in der zugehörigen Bedienungsanleitung angegeben.
- b) Die Befestigung des Standfusses muß derart erfolgen, daß die oberste Zeile der Bildschirmanzeige nicht höher als die Augenhöhe eines Benutzers in sitzender Position ist.
- c) Im Fall eines stehenden Benutzers muß die Befestigung des Bildschirmgerätes derart erfolgen, daß die Höhe der Bildschirmmitte über dem Boden zwischen 135 – 150 cm beträgt.
- d) Der Standfuß muß die Möglichkeit zur Neigung des Bildschirmgerätes besitzen (max. vorwärts: 5°, min. nach hinten $\geq 5^\circ$).
- e) Der Standfuß muß die Möglichkeit zur Drehung des Bildschirmgerätes besitzen (max. $\pm 180^\circ$). Der maximale Kraftaufwand dafür muß weniger als 100 N betragen.
- f) Der Standfuß muß in der Stellung verharren, in die er manuell bewegt wurde.
- g) Der Glanzgrad des Standfusses muß weniger als 20 Glanzeinheiten betragen (seidenmatt).
- h) Der Standfuß mit Bildschirmgerät muß bei einer Neigung von bis zu 10° aus der normalen aufrechten Position kippsicher sein.

Hinweis zur Ergonomie :

Dieser Monitor erfüllt die Anforderungen an die Ergonomie nach EK1-ITB2000 mit dem Videosignal, 1920×1080 (EV2316W / EV2336W) / 1920×1200 (EV2416W / EV2436W), Digital Eingang und mindestens 60,0 Hz Bildwiederholfrequenz, non interlaced. Weiterhin wird aus ergonomischen Gründen empfohlen, die Grundfarbe Blau nicht auf dunklem Untergrund zu verwenden (schlechte Erkennbarkeit, Augenbelastung bei zu geringem Zeichenkontrast.)

Übermäßiger Schalldruck von Ohrhörern bzw. Kopfhörern kann einen Hörverlust bewirken.
Eine Einstellung des Equalizers auf Maximalwerte erhöht die Ausgangsspannung am Ohrhörer- bzw. Kopfhörerausgang und damit auch den Schalldruckpegel.

„Maschinenlärminformations-Verordnung 3. GPSGV:

Der höchste Schalldruckpegel beträgt 70 dB(A) oder weniger gemäss EN ISO 7779“

[Begrenzung des maximalen Schalldruckpegels am Ohr]

Bildschirmgeräte: Größte Ausgangsspannung 150 mV
